

AMENDMENTS TO SPECIFICATION

Please revise the abstract on Page 37 as follows:

A library of materials is screened for characteristics. Accordingly, a library of materials is provided and an electromagnetic wavefront is directed at each member of the library. The electromagnetic wavefront is monitored for a response after the wavefront encounters the library of ~~at least four~~ sample materials. Thereafter, the response of the electromagnetic wavefront is correlated to a characteristic of each of ~~the the at least four~~ sample materials.
